Research Summary

My research interests include control theory, learning-based control, human-centric control, and shared and cooperative control of hybrid exoskeletons and wearable robots. I have hands-on experience in robot design and control and in hardware-in-the-loop experiments. During my PhD, I have developed controllers for input-redundant systems (e.g., hybrid exoskeletons) that distribute the control effort between actuators, such as an exoskeleton and functional electrical stimulation (FES), while taking into account the user's intent. I have used dynamic allocation with stability guarantees, model predictive control (MPC), and EMG-based intent estimation, and have tested these methods with healthy participants and stroke patients on several robotic platforms. In my M.Sc., I worked on Lyapunov-based boundary control of systems described by partial differential equations (PDEs).

Education

04/2021–03/2027 (expected) **Doctoral candidate, Electrical Engineering** — Technical University of Munich
Chair of Information-oriented Control (ITR), TUM School of CIT. Supervisor: Prof. Dr.-Ing. Sandra Hirche.
Dissertation: *Cooperative Shared Control of Hybrid FES–Exoskeleton.*

09/2015–09/2017 **M.Sc. Mechanical Engineering (Applied Mechanics)** — Sharif University of Technology, Tehran
GPA 19.27/20, ranked 2nd of 151. Thesis: *Boundary Control of Vibration in Satellite Flexible Solar Panels* (Lyapunov-based boundary control, asymptotic and exponential stability, disturbance observer). Supervisors: Prof. H. Salarieh, Prof. A. Alasty.

09/2011–09/2015 **B.Sc. Mechanical Engineering** — Shiraz University
GPA 19.05/20, ranked 1st of 89. Project: *Energy harvesting in a piezoelastic beam excited by air flow* (supervisor: Prof. M. Farid).

Research Experience

04/2021–present **Doctoral Researcher** — ITR, Technical University of Munich

- Designed shared and cooperative control for hybrid FES–exoskeletons: impedance-based shared control, MPC-based FES control, and a real-time dynamic allocator that redistributes the required torque between FES and exoskeleton under heterogeneous actuator constraints, with a stability proof and analysis. Extended the allocator to personalized allocation based on participant-specific attainable sets.
- Identified user-specific models (nonlinear, delayed, time-varying neuromuscular dynamics) from sparse data using learning-based methods, and estimated volitional torque from EMG using a novel adaptive filter [Link].
- Conducted studies with healthy participants and stroke patients on the NESM-γ elbow exoskeleton (Scuola Superiore Sant'Anna), the HRX-1 wrist robot (HumanRobotiX), and FES/EMG hardware (Tecnalia) within the EU Horizon 2020 project ReHyb (GA 871767), in collaboration with Imperial College London and Schön Klinik Bad Aibling.
- Developing a hand prosthesis driven by high-density EMG for dexterous hand movements (ongoing).

10/2017–03/2021 **Researcher** — Shiraz University Research Center
Worked on system identification and control; programmed embedded ARM control systems (Keil) with sensors and actuators in C/C++.

Honors and Awards

- Best Paper Award, IEEE-EMBS Conference on Biomedical Engineering and Sciences (IECBES), 2022.
- Ranked 2nd of 151 (M.Sc., Sharif University of Technology); ranked 1st of 89 (B.Sc., Shiraz University).
- Iran's National Elites Foundation: fellowship (2014–2015) and funded teaching-assistant position (2015–2017).
- Distinguished student of the mechanical engineering department, Sharif University of Technology (2015–2016) and Shiraz University (2014–2015).

Teaching and Supervision

- **Advanced Nonlinear Control** (M.Sc. course, ITR, TUM), 2021–present: supervision of student tutorial reports on advanced nonlinear-control topics, reviews, and presentations (five semesters).
- **Advanced Control and Robotics Lab** (M.Sc. lab, LSR and ITR, TUM), SS 2023–SS 2026: supervisor of the *Sliding Mode Control* experiment (four semesters).
- **Thesis and project supervision, TUM:** 16 students (7 B.Sc. theses, 1 M.Sc. thesis, 2 research internships, and 6 engineering internships).

- **Sharif University of Technology (M.Sc.):** teaching assistant for Advanced Control (M.Sc., Fall 2016) and Dynamics (Fall 2015); laboratory assistant, Dynamics of Machinery and Vibrations Lab (three semesters, 2015–2016).

Technical Skills

Programming	MATLAB/Simulink, C/C++, embedded ARM programming (Keil), Python, Git/GitHub, Claude Code
Simulation and CAD	MuJoCo, Simulink, Abaqus, SolidWorks
Hardware	Exoskeletons (elbow, wrist), soft exoglove, prosthetic and dexterous robotic hands, multi-array FES electrodes, EMG and high-density EMG (HD-EMG), force/torque sensors, IMUs, Qualisys motion capture, embedded real-time controllers
Languages	English (fluent), German (basic knowledge), Persian (native)
